ClickFunnels + NMI Integration Guide

TacticalPay | Payment Gateway · Integrations

1 Overview

ClickFunnels connects to NMI through **Payments AI**, the payments hub built into ClickFunnels. You'll link your TacticalPay NMI account to Payments AI once, and your funnels can then take card payments through it.

*This guide is for the **NMI** gateway. On **Authorize.net**? Email us and we'll get you set up. On **Dejavoo iPOSpays**? Email us.*

What You'll Need

- A **ClickFunnels** account with Payments AI.
- Your **NMI username and password** (an admin user) from your TacticalPay welcome email. You log in to NMI to connect — no key to copy.

2 Connect NMI in Payments AI

1. Open **Payments AI** from your ClickFunnels account (or go to `app.payments.ai`).
2. In the top menu, click **Gateways**.
3. Under **Other Gateways**, click **Connect NMI**.
4. A new window asks you to log in to NMI. Enter your NMI username and password, then follow the prompts.
5. When you're sent back to Payments AI, NMI should show **Connected**.

Tip: already have Stripe or another gateway connected? Payments AI can route some payments to NMI and others elsewhere using **Gateway Automation Rules**. If NMI should handle everything, make it your default.

3 Run a Test Sale

1. Buy a low-priced product through one of your funnels with your own card.
2. Log in to NMI at `tacticalpay.transactiongateway.com` and find it under **Transaction Reports**.
3. Void it the same day (**Credit Cards** → **Void**) so it never charges. You're live.

Check ClickFunnels' rules first. ClickFunnels and Payments AI have their own terms on what you can sell. Review them before you launch a firearms funnel. This isn't legal advice — if you're unsure, check with an attorney.
