Hostinger + NMI Integration Guide

TacticalPay | Payment Gateway · Integrations

1 Overview

Hostinger's drag-and-drop **Website Builder** only takes payments through Stripe and PayPal, so it can't connect to NMI. To use your TacticalPay NMI gateway on Hostinger, build your store with Hostinger's **WordPress** hosting and the free **WooCommerce** plugin. A **payment gateway** is the secure link between your website's shopping cart and your merchant account — it sends each card payment from your checkout for approval, then passes the result back so the order can go through.

*This guide is for the **NMI** gateway. On **Authorize.net**? See "Hostinger + Authorize.net Integration Guide" on tacticalpay.com/knowledge-base/payments. On **Dejavoo iPOSpays**? Email us.*

What You'll Need

- A Hostinger **web hosting** plan that includes WordPress, and access to **hPanel**.
- Your NMI keys. The guide in Section 3 tells you which ones you need and where to find them.

2 Set Up WordPress & WooCommerce

1. In **hPanel**, add a website and choose **WordPress**. Follow Hostinger's setup steps.
2. Make sure your site has **SSL** turned on (hPanel → **Security** → **SSL**). Your address should start with `https://`.
3. In your WordPress admin, go to **Plugins** → **Add New Plugin**, search for **WooCommerce**, and click **Install Now** → **Activate**.

3 Connect NMI

1. Follow "WooCommerce + NMI Integration Guide" on `tacticalpay.com/knowledge-base/payments`. It walks you through the NMI plugin, your keys, and a test sale.

Already built on Website Builder? You'll need to move your store to WordPress to use NMI. Don't add a payment form by pasting code into Website Builder — it isn't a supported way to connect your gateway. Email us and we'll help you plan the move.

Need help? More guides are at `tacticalpay.com/knowledge-base/payments`. For questions on this setup, email `Support@TacticalPay.com` — our in-house, Texas-based team will get back to you.
